## 0436P FIELDERS CLADDING - PROFILED SHEET METAL

#### **Branded worksection**

This branded worksection *Template* has been developed by NATSPEC in conjunction with **FIELDERS** (the Product Partner) and may be used whilst the Product Partner is licensed to distribute it. The copyright remains with NATSPEC. As with all NATSPEC worksections, it is the responsibility of the user to make sure it is completed appropriately for the project. The user should also review its applicability for local conditions and regulations. Check www.natspec.com.au for the latest updated version.

#### **Worksection abstract**

This branded worksection *Template* is applicable to FIELDERS lightweight external wall cladding of profiled sheet metal products.

### **Background**

The Australian profiled sheet steel industry is organised as follows:

- BlueScope manufacture COLORBOND® prepainted steel and ZINCALUME® steel coils.
- FIELDERS using steel coils, shape steel into different profiles and cut sheets to length.
- Installers take off material quantities, order and install, often as subcontractors to the contractor.

Additional sheet material available from FIELDERS includes:

FIELDERS Aluminium as noted in 0437p FIELDERS wall cladding - specialised panels.

#### How to use this worksection

Customise this worksection *Template* for each project. See A guide to NATSPEC worksections (www.natspec.com.au) for information on *Template* structure, word styles and completing a worksection.

# Related material located elsewhere in NATSPEC

If a listed worksection is not part of your subscription package and you wish to purchase it, contact NATSPEC.

Related material may be found in other worksections, including:

- 0182 Fire-stopping.
- 0331 Brick and block construction for brick veneer.
- 0342 Light steel framing for subframing.
- 0382 Light timber framing for subframing.
- 0471 Thermal insulation and pliable membranes for wall insulation, thermal break strips and vapour permeable membranes.
- 0511 Lining for internal lightweight linings.
- 0530 Suspended ceilings combined for suspended soffits.
- 0671 Painting for in situ paint finishes.
- 0672 Textured and membrane coatings for in situ application of membrane and surface coatings.

Each of the following worksections contains a single cladding system and may be used if appropriate in addition to this worksection:

- 0432 Curtain walls.
- 0433 Stone cladding.
- 0434 Cladding flat sheets and panels.
- 0435 Cladding planks and weatherboards.
- 0437 Cladding insulated panel systems.

Related branded worksections include:

- 0311p FIELDERS KingFlor in concrete formwork.
- 0423p FIELDERS roofing profiled sheet metal.
- 0424p FIELDERS roofing specialised sheet metal.
- 0437p FIELDERS wall cladding specialised panels.

### Documenting this and related work

You may document this and related work as follows:

 Check if your cladding is required to be non-combustible, refer to BCA (2022) Section C and ABCB Fire performance of external walls and cladding advisory note (2020). Consider adding a requirement in **SUBMISSIONS** for evidence of conformance from the contractor. If using a performance solution for facade cladding, type testing to AS 5113 (2016) may be used as the verification method for external walls.

- Weatherproofing: Conform to BCA (2022) F3D5 for Class 2 to Class 9 buildings or BCA (2022) H1D7 for Class 1 and 10 buildings. Alternatively, document a performance solution. Consider adding a requirement for evidence of conformance from the contractor. Refer to NATSPEC TECHnote DES 044 for information on weatherproofing of external walls.
- Document the structural support system to your office documentation policy.
- Locate the extent of cladding types, accessories and finishes on drawings to your office documentation policy.
- Penetrations: Show on the drawings the location and extent of penetrations for services and structural elements including flashing details.
- For flush jointed fibre cement soffit lining import the relevant material from 0511 Lining.
- If required, state the minimum thermal resistance (R-Value) (m<sup>2</sup>.K/W). See NATSPEC TECHnote DES 031 for information on specifying R-Values.
- In bushfire-prone areas, document bushfire protection requirements to AS 3959 (2018) and the NCC. See NATSPEC TECHnote DES 018 for information on bushfire protection.
- Check lead time for imported selections and consider adding a requirement, in SUBMISSIONS, for the contractor to confirm availability.

The *Normal* style text of this worksection may refer to items as being documented elsewhere in the contract documentation. Make sure they are documented.

For example:

Location of control joints.

Search acumen.architecture.com.au, the Australian Institute of Architects' practice advisory subscription service, for notes on the following:

Guarantees and warranties.

### **Specifying ESD**

The following may be specified by including additional text:

- Metal cladding manufactured from recycled metal and/or is recyclable.
- Metal cladding finished with low VOC or non-VOC finish.

Refer to NATSPEC TECHreport TR 01 on specifying ESD.

### 1 GENERAL

Fielders is a leading local manufacturer of a comprehensive range of roll-formed steel products supplied to commercial, industrial and domestic building markets throughout Australia.

Fielders' focus on innovation, breadth of product and extensive customer support offering, make it a preferred supplier for engineers, architects and construction companies around the country.

The Fielders range is supported by 10 branches nationwide, including manufacturing facilities at Novar Gardens, SA and Campbellfield, VIC, which also offer in-house processing capabilities.

# 1.1 RESPONSIBILITIES

# General

Requirement: Provide FIELDERS profiled sheet metal, external wall cladding and associated work, as documented.

Documented is defined in 0171 General requirements as meaning contained in the contract documents.

## Corrosion resistance

Material: To the manufacturer's recommendations for distance from marine influence.

Distance from marine influence: [complete/delete]

The distance from marine influence can be used as a guide to determine the finish and grade of steel required, however other factors may also need consideration. For information on determining corrosivity categories in relation to environmental influences, see AS 2312.1 (2014) Table 2.1, AS 4312 (2019) Table 2.1 and Table 4.1. Refer to **CORROSION RESISTANCE**, **Atmospheric corrosivity category** in *0171 General requirements*, for the project corrosivity categories to AS 4312 (2019). Refer also to BlueScope Technical bulletins BlueScope TB-01A (2023) and BlueScope TB-01B (2022), which discuss the selection of steel roofing and walling products, and the correlation of distance to marine influence to the corrosion categories defined in AS 4312 (2019).

## 1.2 COMPANY CONTACTS

## **FIELDERS** technical contacts

Website: www.fielders.com.au/contact/get-a-quote

#### 1.3 CROSS REFERENCES

## General

Requirement: Conform to the following:

- 0171 General requirements.

0171 General requirements contains umbrella requirements for all building and services worksections.

List the worksections cross referenced by this worksection. *0171 General requirements* references the *018 Common requirements* subgroup of worksections. It is not necessary to repeat them here. However, you may also wish to direct the contractor to other worksections where there may be work that is closely associated with this work.

NATSPEC uses generic worksection titles, whether or not there are branded equivalents. If you use a branded worksection, change the cross reference here.

## 1.4 MANUFACTURER'S DOCUMENTS

# **FIELDERS** technical manuals

FIELDERS Roofing and Walling: specifying.fielders.com.au

#### 1.5 TOLERANCES

## **Permitted deviations**

Requirement: To AS 1562.1 (2018) clause 4.2.3 and FIELDERS recommendations.

## 1.6 SUBMISSIONS

# Operation and maintenance manuals

Requirement: Submit manual to COMPLETION, Operation and maintenance manuals.

## **Products and materials**

Type tests: Submit test results for the following:
- Facade: To PRODUCTS, **GENERAL**, **Tests**.

Type tests are carried out off-site. However, submission of evidence of a successful type test may be called up here for requirements specified in PRODUCTS.

## Evidence of delivery: Submit delivery docket as evidence of delivery of [complete/delete]

If evidence of delivery to site is required for particular products, consider including this *Optional* style text by changing to *Normal* style.

## **Samples**

Requirement: Submit samples to PRODUCTS, GENERAL, Samples.

#### **Subcontractors**

General: Submit names and contact details of proposed installers.

Evidence of experience: [complete/delete]

e.g. Check conditions of warranty for panels selected. Delete if installer details are not required.

## Warranties

Requirement: Submit warranties to COMPLETION, Warranties.

## 1.7 INSPECTION

#### **Notice**

Inspection: Give notice so that inspection may be made of the following:

- Framing, pliable membranes and insulation before covering up or concealing.

Edit to suit the project, adding critical stage inspections required.

Hold points, if required, should be inserted here.

## 2 PRODUCTS

#### 2.1 GENERAL

## **Product substitution**

Other products: Conform to **SUBSTITUTIONS** in 0171 General requirements.

**SUBSTITUTIONS** in *0171 General requirements* sets out the submissions required if the contractor proposes alternative products. Refer also to NATSPEC TECHnote GEN 006 for more information on proprietary specification.

# **Samples**

Approved samples that define the acceptable limits of colour and texture variations are retained on site. If particular or additional samples are required, list them here.

Requirement: Provide samples of the cladding material.

## Storage and handling

Requirement: Store and handle materials to the manufacturer's recommendations and the following:

- Protect materials including edges and surfaces from damage.
- Do not drag sheets across each other or over other materials.
- Store metal materials away from uncured concrete and masonry on a level base.
- Do not store metal materials in contact with other materials that may cause staining, denting or other surface damage.
- Use gloves when handling precoated metal cladding material.

#### **Product identification**

General: Marked to show the following:

- Manufacturer's identification.
- Product brand name.
- Product type.
- Quantity.
- Product reference code and batch number.
- Date of manufacture.

Edit the list to suit the project or delete if not required.

#### **Tests**

0171 General requirements defines different tests in INTERPRETATION, Definitions.

Resistance to wind pressures:

- Non-cyclonic wind regions: To AS 4040.2 (1992).
- Cyclonic wind regions: To AS 4040.3 (2018).

## 2.2 PROFILED SHEET METAL

#### General

Requirement: FIELDERS profiled sheet metal cladding.

Design and installation: To AS 1562.1 (2018).

Selection: To the FIELDERS profiled sheet metal cladding schedule.

## 2.3 COMPONENTS

## **Fasteners**

Type, size, corrosion resistance class and spacing: To FIELDERS recommendations.

Finish for exposed fasteners on coloured cladding: Prefinish exposed fasteners with an oven baked polymer coating to match the roofing cladding material.

## **FIELDERS** flashings and cappings

Standard: To AS/NZS 2904 (1995).

Coordinate with 0423p FIELDERS roofing - profiled sheet metal.

Product: FIELDERS Steel Roofing.

Material and colour: Match wall sheeting.

Rib notching: Match wall sheeting.

#### 3 EXECUTION

#### 3.1 GENERAL

## **Preparation**

Substrates or framing: Before fixing cladding, check the alignment of substrates or framing and adjust if required.

Flexible underlay: Check that the underlay or insulation is restrained.

Cladding: Make sure the cladding is clean and free of dust and loose particles.

#### Installation

Standard: To AS 1562.1 (2018).

Requirement: To FIELDERS recommendations. Fixing method: As documented or to the following:

- Steel and timber framing: Screw.
- Minimum penetration for profiled metal sheets: 25 mm for timber framing.
- Plumb, level, straight and to documented tolerances.
- Fixed or anchored to the building structure in conformance with the wind action loading recommendations.
- Isolated from any building loads, including loads caused by structural deflection or shortening.
- Allow for thermal movement.

Expansion and contraction of the components needs to be provided for. Temperature change due to climatic conditions must not cause harmful buckling, opening of joints, undue stress on fastening and anchors, noise of any kind or other defects.

Cladding layout: Cut/fabricate and install cladding to suit the layout as documented.

Document the location of openings and penetrations to avoid waste and panel handling times.

Protection: Protect surfaces and finishes, including the retention of protective coatings during installation.

# Accessories and trim

Requirement: Provide accessories and trim required to complete the installation.

Corner flashing: Finish off corners with purpose-made folded flashing strips.

# Metal separation

Make sure of compatibility or detail separation.

See AS 1562.1 (2018) Appendix C Table C3 for guidance on the compatibility of metals. See also SA HB 39 (2015) Section 2 on material selection. It is primarily a design responsibility that incompatible metals are not documented or shown to be in contact. Preferably show the separation method on the drawings.

Corrosion can result from water run-off between incompatible surfaces. See AS 1562.1 (2018) clause 3.4.3 and AS 1562.1 (2018) Appendix C Table C4. There are four conditions to be avoided:

- Run-off from copper and copper alloys onto aluminium, zinc, galvanized, or aluminium/zinc-coated surfaces.
- Run-off from glass onto stainless steel, zinc or galvanized surfaces.
- Run-off from plastic onto zinc or galvanized surfaces.
- Run-off from inert catchment surfaces such as glazed terracotta, prepainted steel, aluminium and aluminium/zinc onto zinc
  or galvanized surfaces.

In marine or high humidity environments, separate green hardwood from aluminium and coated steel.

Typical methods for metal separation include:

- Applying an anti-corrosion, low moisture transmission coating such as zinc or barium chromate primer or aluminium pigmented bituminous paint to contact surfaces.
- Inserting a separation layer such as polyethylene film, adhesive tape or bituminous felt.

Requirement: Prevent direct contact between incompatible metals, and between green hardwood or chemically treated timber and aluminium or coated steel, by either of the following methods:

- Apply an anti-corrosion, low moisture transmission coating to contact surfaces.
- Insert a separation layer.

Incompatible metal fixings: Do not use.

## Horizontal cladding

Horizontal cladding surface:

- Minimum slope: 1:15.
- Staining: Slope away from visible vertical facade areas to prevent staining.

## **Defective and damaged parts**

Defective components: Do not install component parts that are defective, including warped, bowed, dented, chipped, scratched, abraded or broken members.

Damaged parts: Remove and replace damaged parts during installation.

## 3.2 PROFILED SHEET METAL CLADDING

#### General

Installation: To AS 1562.1 (2018).

Ground clearance: Maintain documented clearance.

Cutting sheets: Wherever possible, factory cut to length. Do not use an abrasion disc.

Accessories: Provide material with the same finish as cladding sheets. Swarf: Remove swarf and other debris as soon as it is deposited.

#### **Fixing**

Fixing start location: [complete/delete]

Note the elevation that will allow fixing to proceed from leeward to the windward of prevailing wind.

#### **Joints**

## Expansion joints: [complete/delete]

As a minimum, expansion joints should be provided every 35 m in sheet length for walls with concealed fixings and 24 m in sheet length for walls with exposed fixings. Refer to manufacturer's recommendation.

## 3.3 COMPLETION

### **Fasteners**

Requirement: Adjust for weathertightness without distortion of external panel face.

### Reinstatement

Extent: Repair or replace damage to the cladding. If the work cannot be repaired satisfactorily, replace the whole area affected.

Damage to prepainted finish: Replace panels with scratches in the prepainted finish.

#### Cleaning

Requirement: Remove excess debris, metal swarf, solder, sealants and unused materials.

Exposed metal surfaces: Clean surfaces of substances that interfere with uniform weathering or oxidisation.

Protection: Remove protective coatings using methods required by the manufacturer after completion.

Protective film will withstand exposure to weather for a limited period of time before losing its peel-off characteristics and causing staining. The gloss coating changes when exposed to plasticisers.

Panels: Clean surfaces with soft, clean cloths and clean water to the manufacturer's recommendations.

# Operation and maintenance manuals

Requirement: Prepare a manual that includes recommendations from FIELDERS for the maintenance of the cladding system, including frequency of inspection and methods of access, inspection, cleaning, repair and replacement.

Refer to Maintenance and Care on FIELDERS website.

Compliance with this subclause targets the Operations and Maintenance requirement within the Minimum Expectation level of the Verification and Handover credit in Green Star Buildings (2021).

#### Warranties

### Warranty period:

- Material warranty: [complete/delete]
- Watertight installation guarantee: [complete/delete]

Maximum material warranties - Select from:

• Zincalume® steel & Colorbond® steel range: Up to 25 years.

Maximum watertight installation warranties:

- · Pierced fixing: 5 years.
- Concealed fixing: 20 years.

#### Conditions:

Material warranty: Subject to satisfactory inspection of the installation by FIELDERS.

Use only if warranties extending beyond the defects liability period are available for the particular system. Insert the required warranty period and terms, which should be negotiated beforehand. If the warranty is in the form of separate material and installation warranties, the signatures of both manufacturer and installer are required. Delete if not applicable.

#### 4 SELECTIONS

**Schedules** are a tool to specify properties required for products or systems. If the principal permits documentation of the product or system by proprietary name, some of the properties may be unnecessary and can be deleted. Document the product or system's location or application here and/or on the drawings with a matching project code. Refer to NATSPEC TECHnote GEN 024 for guidance on using and editing schedules.

#### 4.1 PERFORMANCE

# Cladding performance schedule

|   | A | В | С |
|---|---|---|---|
| Non-combustibility                          |   |   |   |
| Fire hazard property: Group number          |   |   |   |
| Fire hazard property: Spread-of-Flame Index |   |   |   |
| Fire hazard property: Smoke-Developed Index |   |   |   |
| Fire-resistance level (FRL)                 |   |   |   |
| R-Value (m <sup>2</sup> .K/W)               |   |   |   |
| Acoustic characteristic                     |   |   |   |
| Solar absorptance                           |   |   |   |
| Light Reflectance Value (LRV)               |   |   |   |

The codes in the header row of the schedule designate each application or location of the item scheduled. Edit the codes to match those in other contract documents.

Non-combustibility: Required or not required.

Fire hazard property: Group Number: Refer to BCA (2022) Spec 7.

Fire hazard property: Spread-of-Flame Index: e.g. 0.

Fire hazard property: Smoke-Developed Index: e.g. 3.

Fire-resistance level (FRL): If required, nominate the FRL to AS 1530.4 (2014). See NATSPEC TECHnote DES 020 on fire behaviour of building materials and assemblies.

R-Value (m².K/W): Select from manufacturer's range. AS/NZS 4859.1 (2018) requires that R-Value is declared at 23°C for insulation products sold in Australia.

Acoustic characteristic: Consult manufacturer. Schedule values if required.

Solar absorptance: Select from manufacturer's range. Light (< 0.40), Medium (0.40 to 0.60), Dark (> 0.60). See BCA (2022) J3D8 for external walls to a Class 2 building or a Class 4 part of a building.

Light Reflectance Value (LRV): If required, nominate the light reflectance value. Some local authorities limit the light reflectance value for building exteriors. Refer to the relevant local authority for any requirements.

## 4.2 PRODUCT

# FIELDERS profiled sheet metal cladding schedule

| A | В | С |
|---|---|---|
|---|---|---|

|                            | Α | В | С |
|----------------------------|---|---|---|
| Profile                    |   |   |   |
| Fixing system              |   |   |   |
| Material type              |   |   |   |
| Thickness (mm)             |   |   |   |
| Colour                     |   |   |   |
| Trims                      |   |   |   |
| Flashings and capping type |   |   |   |
| Screw fasteners            |   |   |   |

The codes in the header row of the schedule designate each application or location of the item scheduled. Edit the codes to match those in other contract documents.

Profile: Select from the following for screw fixed sheeting:

- FIELDERS TL-5<sup>®</sup>.
- FIELDERS S-Rib™ Corrugated.
- FIELDERS Lo-Rib™.
- FIELDERS Panelform™.
- FIELDERS Mini-Flute<sup>®</sup>.

Fixing system: e.g. waterproof direct fix, top hat framing, ventilated cavity/rainscreen.

Material type: Select the product material recommended by FIELDERS with reference to the atmospheric corrosivity category nominated for the project in 0171 General requirements. Refer also to NATSPEC TECHnote DES 010.

- Benign: COLORBOND® steel, COLORBOND® Matt steel, COLORBOND® Metallic steel or ZINCALUME® steel.
- Moderate: COLORBOND® steel, COLORBOND® Matt steel.
- Severe marine: COLORBOND® Ultra steel.
- Very severe marine: COLORBOND® Stainless steel.

Galvanized finishes are available for S-Rib™ Corrugated and Heritage Barrel Rolled ¾" Corrugated with a Z600 zinc coating.

This is a guide only. Contact FIELDERS to determine the appropriate product for the project location. Please note that a different grade of COLORBOND® steel for walling applications within the same project may be required.

Thickness: Select from:

- COLORBOND® Stainless steel: 0.42.
- COLORBOND® Ultra steel: 0.42 or 0.48.
- COLORBOND® steel, COLORBOND® Matt steel or ZINCALUME® steel: 0.35, 0.42 (economical/domestic/light industrial),
   0.48 (commercial / industrial).
- COLORBOND® Metallic steel: 0.48.
- Pre curved sheeting: Contact FIELDERS. (The recommended thickness varies with the extent of curve.)

Colour: Consult the FIELDERS COLORBOND® Colour Charts. Refer to FIELDERS website.

Trims: e.g. Proprietary accessories for sills, reveals or corner returns.

Flashings and capping types: List here or delete and refer to details. Flashing and capping types are available for all abutments and edge conditions and are illustrated in FIELDERS website.

Screw fasteners: e.g. Concealed or Pierced: Crest or Valley screws to suit the profile. Refer to FIELDERS website or contact FIELDERS.
